

DOCTORING MACHINE AUTODOCT

INSPECTION CUM SALVAGE REWINDER

In any paper, film & foil conversion industry, "SLITTING" is invariably the last operation to be performed. At the time of slitting, irrespective of the brand and type of slitting machine employed, 10 to 12% of the output (i.e. One out of 10 or 8 slit to size bobbins) is not of saleable quality.

This is a Harsh practical fact and the reason there of are quite well known.

The model is specially designed for correcting badly wound roller for removing the misregistered and rejected material before it goes to final delivery, in order to rectify salvage such rejection, the Doctoring machine has been specially developed through the R & D efforts at C. T.

NARROW WEB SLITTING CUM DOCTORING (INSPECTION MACHINE)

SPECIFICATION

- Web Width: Up to 400mm
- Unwind Dia.: Up to 800mm
- Rewind Dia.: Up to 250mm Two Stage
- Machine Speed: 125 MPM
- Cutting: Circular & Razor Knife Inspection : 300mm

OPTIONAL

- Edge Guiding System
- Auto Tension Control For Unwind
- Auto Tension Control For Rewind
- Strobe Scope
- Video Scope
- Inkjet Printer
- Online Drying System
- Air Shaft For Unwind

FEATURE

- Mechanical Web Gripper & Cross Cutting Slot on Inspection Table
- Removable Slitting Station
- Adjustable Slitting assembly at the running speed
- Individual drive for both rewind station synchronize with Nip and slitting Drive
- Speed indicators Mtrs/Min., Length Counter / Batch Counter
- Inspection Mounting Facility for Strobe Light & Video Vision, Individual Slip ring for each roll
